YOUR CAREER

Technical Warehouse Operator – IBM Asset Management

DSV is hiring Technical Warehouse Operator, in Bolintin-Deal Logistics Warehouse, Romania.

The Role

- We are seeking a reliable Warehouse Operator to join our team. Working inside a secure area and using a dedicated RMS system, you will perform standard warehouse activities along with simple “Plug and Play” technical tasks whilst following step-by-step work instructions.

Key Tasks

- **Warehousing Processes:** Working inside DSV’s RMS system you will receive devices, accessories and consumables and put-away to stock. You will pick, pack and label orders ready for collection by a courier for outbound shipping. In the same way you will pick and pack and made ready for collection by a courier, devices heading to scrap.
- **Technical Processes:** Following work instructions in local language and working within DSV’s RMS system, you will undertake “Plug and Play” activities such as diagnostics testing, data wipe and operating system updates. By scanning a device serial number into DSV’s RMS system, you will be guided step by step through the appropriate workflow. You will place to one side devices which fail testing and continue processing them once repaired by an external repair partner. Your final step will be to clean and re-box all devices.
- **System & Tool Utilization:** DSV Returns Management System (RMS), PC Doctor.

All tasks are performed using DSV’s RMS system and Diagnostics Test Solution.

All SOP's and User Manuals are in local language.

Skills and Competencies

- High School Graduate.
- Previous experience of working in a warehousing or production environment is considered a plus.
- Basic computer skills.
- Fluent in the local language, English would be a plus.

Available to start on **15 December 2025** and open to travel for training purposes.

Interested in working with us on Logistics topics? We look forward to receiving your application via e-mail to Codruta.enache@dbschenker.com.
